Experience

CookUnity

AI-Native Software Engineer — Oct 2025 – Present

- Took **multi-model AI code review to 500+ repositories**: parallel reviewers, an arbiter, and ROI tracking in Mixpanel.
- Built the AI coding plugin marketplace: versioned, sandboxed plugins for Claude Code, Codex CLI, and OpenCode.
- Built an AI-assisted performance review platform (Next.js, Supabase, Slack), now running live HR pilots.
- Stood up a remote MCP server for AI agents and automated Ramp purchase orders across three 3PL pilots.
- Owned intake for 100+ AI enablement requests and set priorities across 12+ cross-functional AI projects.
- Built WholesaleWare's inventory reconciliation: roll-forward, variance, audited adjustments, multi-warehouse reports.

Rootly

AI Engineer (Contract) — Oct 2024 – Dec 2024

- Founding AI engineer: designed and built Rootly's **RAG root-cause agent** end to end over incidents, Slack, and GitHub.

Cohere

Machine Learning Engineer Intern — Apr 2024 – Oct 2024

- **First engineer to contribute fully synthetic training data** to Command R+; lifted LLM quantitative reasoning 3%.
- Built length-control evals, adapted FinanceBench for base models, and ran the ablations measuring each dataset's impact.

Senior Data Quality Team Lead — Jun 2023 – Apr 2024

- Built a React/TypeScript + Firebase **labeling platform for 200+ labelers, saving ~$3M**.
- Led SFT/RLHF data for Cohere's LLMs, launched the first STEM/code labeling cohort, and set the vendor quality bar.

Speaking

Guest Lecturer: AI & Synthetic Data Generation — 2024

Queen's Smith School of Business · **Master of Management Analytics** program · 50+ graduate students

Selected Projects

balatroAI — Python · PyTorch · PPO

Balatro RL agent that plays the live game: masked PPO, pointer-network action heads, one API for simulator and game.

pi-jev — TypeScript · npm

LLM-judged safety gate for Pi coding agents, on npm: scores every bash/write/edit call for damage, exfiltration, scope.

steam-frame-nixos — Nix · aarch64 · SteamVR

World's first to flash a custom OS onto Valve's Steam Frame, 10 days after launch: rebuilt Valve's kernel and graphics stack from source on NixOS; tracking, controllers, SteamVR, and Steam login all work, with no firmware modified.

cudaterm — CUDA · C++ · OpenGL

Terminal emulator built entirely with CUDA: the GPU parses escape codes, holds screen state, and draws every glyph.

strictix — Rust · Nix

Nix static analyzer built from scratch: lexer, parser, semantic analysis, schema-aware diagnostics, and safe auto-fixes.

Technical Skills

Model work	RL training in PyTorch/JAX, **synthetic data generation for SFT/RLHF/RLAIF**, LLM evals and ablations
AI systems	**Agent harnesses**, multi-model pipelines, RAG, MCP servers, LLM judges, coding-agent tooling
Languages	Python, TypeScript, Rust, Nix, SQL
Infrastructure	AWS (Bedrock, Lambda, S3), GCP, Vercel, Supabase, Firebase, Docker, NixOS, Slurm, **CUDA**

Education

University of Toronto *BSc, Computer Science and Mathematics* — Sep 2017 – May 2022
